Tested Organisms and Results

Panel: Monkeypox Virus Panel

Organism	Results
Monkeypox Virus	Positive

Processing and Detection Methodology:

Monkeypox Testing methodology: The infectious disease detection panels are tested utilizing Real-time reverse transcription polymerase chain reaction(RT-PCR) technology to detect the presence of genes associated with pathogens via amplification of genomic DNA. Amplification and detection are performed using the Applied Biosystems™ QuantStudio™ 5 Real-time PCR system, which includes the QuantStudio™ Data and analysis Software, ExpressionSuite v1.3 software and Thermo Fisher Scientific TaqMan™ assays.

Disclaimer: Lab disclaimer language: This test was developed and its performance characteristics determined by Streamline Diagnostics™. It has not been cleared or approved by the FDA. The laboratory is regulated under CLIA as qualified to perform high complexity testing. This test is used for clinical purposes. It should not be regarded as investigational or for research. Pharmacy guidance and recommendations therein are not under the purview of the laboratory or agencies which accredit the laboratory.
